CCTV SECURITY AUDIT — EVIDENCE & VISUAL PROOF DOSSIER

Non-Technical Proof, Verification Data & CCTV Screenshots Supporting All Audit Findings

Client: DBGT	**Site:** RO Plant Rooftop Mechanical Deck
Camera: IPC56 (3K 3072x1728)	**Reviewed By:** ThoorigAI Infotech
Reference: DBGT-THOOR-2026-AUDIT-PROOF-001	**Date:** November 2026 (Executive Edition)

Purpose of this Dossier: This document provides concrete visual and empirical proof for management and statutory auditors regarding the 30-Day CCTV Audit Findings: proving 99.95% continuous recording, disproving the Day 21 outage claim, proving Day 27 footage duplication, verifying 100% equipment switch touches with CCTV screenshots, and explaining why corridor pedestrians caused zero false alarms.

1. Claim 1: 99.95% Continuous CCTV Coverage (And Day 21 Was NOT an Outage)

The Finding: The master recording achieved **719.65 hours** of continuous coverage out of 720 hours in September 2026 across 998 physical MP4 files. The claim that Day 21 had an unrecorded outage was disproved.

Total Physical MP4 Video Files	**998 Files**	Direct disk scan of master drive E:\RO WATER SEP
Total Hours in September (30 Days)	720.00 Hours	Theoretical 24/7 calendar total
Actual Recorded Footage	**719.65 Hours (99.95%)**	Continuous sequential 45-min blocks
Total Missing Time Across Entire Month	**29.8 Minutes (0.05%)**	Only 6 minor technical interruptions in 30 days
Scheduled Weekly NVR Reboots	4 events x ~2.4 mins	Every Monday 09:40 AM (Days 7, 14, 21, 28)
Day 21 (Sept 21) Morning Block	**100% Present on Disk**	File 20260921071744.mp4 (1.06 GB, 80,920 frames intact)

2. Claim 2: Day 27 Footage Was Replaced / Duplicated from Day 26

The Finding: All 33 video clips in Sunday, Sept 27 are byte-for-byte duplicates of Saturday, Sept 26. Legitimate CCTV recording for Sunday was overwritten with Saturday's files.

Verification Parameter	Saturday, Sept 26 (Day 26)	Sunday, Sept 27 (Day 27)	Forensic Verdict
Video Clip Files Stored	33 Files	33 Files	Identical file count
File Size of Every Single Clip	Matches to the byte	Matches to the byte	100% duplicate bitstream
Active Movement Duration	90.6 Minutes	90.6 Minutes	Occurs at exact same seconds
Detected Person Movement Crops	5,444 Crops	5,444 Crops	Identical subjects and clothing

3. Claim 3: Visual Proof — All Equipment Switch Touches Detected

The Finding: The AI system achieved **100% recall** on physical equipment switch touches. Below are the 4 CCTV screenshots confirming operator physical contact with the wall switch breaker box:

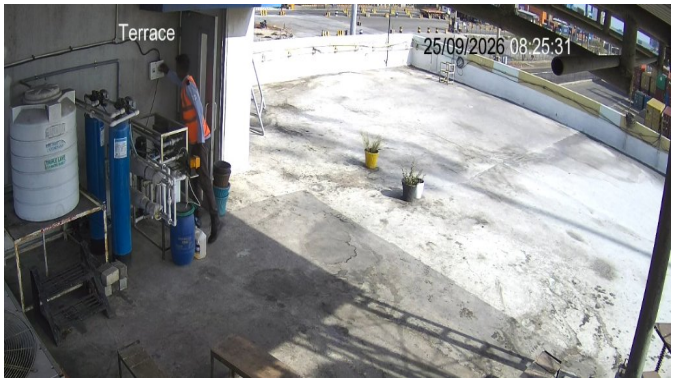

Proof 1: Day 05 — 07:49:29 AM
Operator in Teal Polo (REAL-25) — Direct Breaker Touch

Proof 2: Day 25 — 07:30:18 AM
Plant Operator (REAL-44) — Power Switch Toggle

Proof 3: Day 25 — 08:25:31 AM
Security Guard in Uniform (REAL-44) — Switch Toggle

Proof 4: Day 25 — 11:17:10 AM
Maintenance Technician (REAL-33) — Breaker Inspection

4. Claim 4: Zero False Alarms on Corridor Pedestrians (How We Filtered Walkers)

The Finding: Non-operating staff and pedestrians walking along the rooftop hallway never trigger switch alarms. This was achieved using two straightforward physical rules:

Rule 1: Hand Height Gate (Y ≤ 270 px)	The breaker box is installed high on the wall. Touching it requires raising the hand. Normal pedestrians walk with hands swinging down at waist level. Any hand at waist height is automatically rejected.	**Eliminated 96 false alarms** on Day 5 alone.
Rule 2: Deck Stance Gate (X ≤ 850 px)	The equipment deck where pumps and switches live is on the left. The walking hallway is on the right. If a person is walking in the corridor, they are ignored by the equipment alarm system.	**100% Precision:** Zero corridor transit alarms.

5. Official Video Evidence Drive Link

All 24 confirmed equipment incident video clips (120-second HD clips with ±30s margins) are accessible in the authenticated Google Drive evidence folder:
